

VIRTUAL WORKSHOP

Culvert Vulnerability Assessment Research

Screen forest-road networks.
Prioritize higher-risk culverts.

December 3, 2026

3-HOUR SESSION

1--4 p.m. EST | Virtual via Microsoft Teams

10 a.m.-1 p.m. PST · 11 a.m.-2 p.m. MT · Noon-3 p.m. CT

ABOUT THE WORKSHOP

Explore CULVERT, an automated, web-based decision-support tool under continuous expansion, from a multi-phase research collaboration led by the U.S. Forest Service. Its ensemble modeling approach currently helps identify forest-road culverts vulnerable to **flooding, erosion, and debris flows** before field visits. Coverage of post-wildfire impacts is planned for the near future.

Screen large roadway networks and prioritize field inspections, mitigation, design, restoration, and replacement.

WHO SHOULD ATTEND

Federal land agency managers, engineers, hydrologists, and researchers.

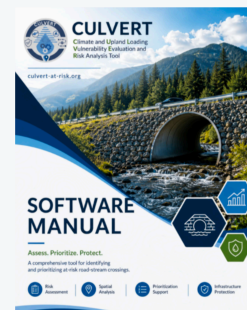

PARTICIPATE

Seeking 2-3 staff from each federal land management agency, plus FHWA staff.

Send participant names to:

Brandon.Strohl@dot.gov
